A HOUSE OF QUALITY SOLUTIONS

## OBJECTIVES OF THE CONFERENCE

The purpose of this national conference is to evaluate the biodiversity loss and climate change as well as to provide a forum for comprehensive discussions and actions that will contribute to the preservation of biodiversity and the mitigation of climate change for the benefit of present and future generations. The objectives of this conference are as follow:

1. To increase awareness about the interconnection between biodiversity loss and climate change and the severe consequences of these issues for the environment, ecosystems, and human society.
2. To provide a platform for sharing and disseminating the latest scientific research, findings, and innovations related to biodiversity and climate change.
3. To facilitate discussions on existing policies and the need for new policies and strategies to mitigate biodiversity loss and combat climate change.
4. To promote collaboration and networking among different stakeholders, including government agencies, NGOs, businesses households, and academia, to work together on the solutions
5. To raise public awareness in large so that the public understands the urgency of these issues
6. To promote capacity building for addressing the challenges of biodiversity loss and climate change.

## ABOUT THE COLLEGE

The college, with its elegant and majestic campus, came into existence in 1985 as a multi faculty co-educational institute to quench the educational desires of the rural people. Affiliated to the Himachal Pradesh University, Shimla, and Sardar Vallabhbhai Patel University Mandi H.P. The college is nestled in the outskirts of Sarkaghat town in the lush green fields and it lies between Chandrakhri hill range in the North West and Devbrarta hill range in the East.

## HOW TO REACH

## ABOUT THE CONFERENCE

Climate change and biodiversity are closely linked: climate change has severe direct and indirect impacts on biodiversity and is predicted to be dominant driver of future biodiversity loss. At the same time, the loss of biodiversity magnifies the adverse effects of climate change. There are several other drivers of biodiversity loss including habitat degradation / destruction and the introduction of invasive alien species to ecosystem but these threats will be magnified by the effects of climate change and are therefore linked to the same problem. The links between biodiversity and climate change run both ways. Biodiversity is threatened by climate change, but proper management of biodiversity can reduce the impacts of climate change. So, the present national conference on biodiversity loss and climate change will be a sincere attempt in an organized event that focuses on addressing the critical and interrelated issues of biodiversity loss and climate change. This conference will serve as important platforms for bringing together a wide range of stakeholders, including government officials, scientists, conservationists, nongovernmental organizations, academics and the public, to discuss, share knowledge and collaborate on strategies to mitigate these global challenges and pave a way for sustainable development.
